

1. Optimize the distribution

$$\min_Q \{ \mathbb{E}_Q[S(v)] + D_{\text{KL}}(Q \| P_0) \}$$

$$S(v) = \frac{\kappa}{2}(v-1)^2, \quad \kappa = 2 \log 2, \quad \lambda = 1$$

2. Choose the Gaussian mean

$$\min_m D_{\text{KL}}(P^* \| Q_m), \quad Q_m = \mathcal{N}(m, 1)$$
